

WOODSIGN
IN COLLABORATION
WITH LARS VEJEN

Design studio

dansign

dansign

For many years, Dansign has produced unique signage systems with a patented magnetic lock system. This ensures easy exchange of the front panels and at the same time protects against theft.

The heart of our business has always been to offer high-end products made from the best materials in a timeless design. The modular structure and the flexibility of our systems have been appreciated by architects, contractors and end-users alike.

The first signage system that Dansign developed was LockSign, followed by CurveSign, PlanSign and GuideSign.

We wanted to create a new line of signage based on the flexibility and the locking system of our well-known product lines combined with a exclusive, sustainable and nordic look.

In collaboration with Lars Vejen – architect MAA - we are proud to present WoodSign - our latest addition to the family of products of DanSign.

We have featured fronts in Oak, Walnut, Ash and Smoked Oak on a frame of anodized aluminum. The products can be customized to include many other wood types, composite materials or acrylic, according to customer needs. Also, the system can be fully combined with e.g. PlanSign and Locksign to upgrade existing signage.
